SIEM / Log Management [Security Incident & Event Management]

© CMIT Boston Cambridge

EVALUATE.
[WHAT IS IT?]

SIEM collects and aggregates systems logs, firewall logs, IDS/IPS logs, event logs, etc. and allows for simplified monitoring, investigations, and identifying of potential security issues.

AUTOMATE.
[WHY DO I NEED IT?]

Leveraging a SIEM automates and simplifies log monitoring while increasing security issue awareness. Laws and regulations also require the periodic review and retention of security log data.

REPORT.
[CMIT PROTECTION]

CMIT has a custom Security Incident & Event Management system which can store and report on various system log data, to help keep your company information properly protected.
