

Penetration Testing

© CMIT Boston Cambridge

SIMULATE. [WHAT IS IT?]

Penetration testing or 'pen testing' is an authorized simulated attack used to evaluate the security of a computer system, network or web application.

EXPLOIT. [WHY DO I NEED IT?]

Pen testing is key for an organization because it allows the organization to understand which vulnerabilities can be exploited and need to be remediated.

REMEDiate. [CMIT PROTECTION]

These professional high-quality pen tests include reports with executive summaries and detailed lists of vulnerabilities for remediation.
